

Transform support services with data and insights.

A smart care solution for disability
service providers.

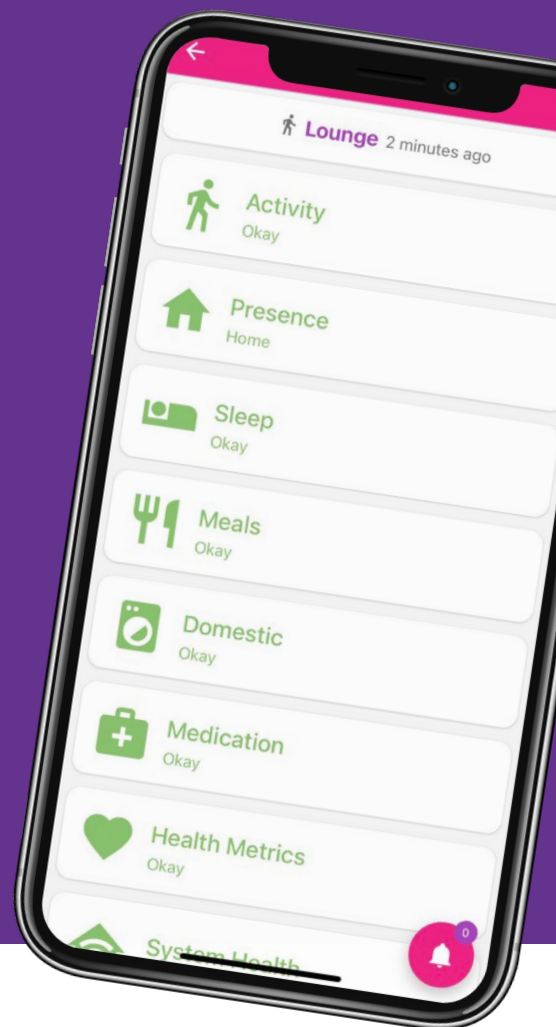

Helping you see health and well-being insights.

Customise your support services to improve people with disabilities' health and well-being based on live and historical data.

InteliCare's smart care solution combines discreet sensors, wearable technologies and alert devices to provide multiple layers of intelligence and insights.

InteliCare analyses patterns of behaviour, including during night shifts.

The smart care solution identifies any changes and alerts support teams. This empowers them to respond or escalate support and care proactively.

24/7 Remote care for multiple people

Using InteliCare's mobile and desktop platforms, support teams are able to view live and historical data from numerous people in multiple locations.

Daily notifications and emergency alerts give support teams peace of mind that the solution is working behind the scenes. InteliCare captures data that could've previously been missed without

24/7 in-person care.

Editable, automated reports and easy-to-use graphs allow support teams to evaluate numerous households from a single digital location. This empowers them to triage care and work collaboratively.

360° overview of health and well-being

InteliCare users can also incorporate over 60 TGA and FDA-approved health metrics devices. This includes iHealth, Fitbit and Garmin devices.

This provides data on:

- ✓ **Respiration**
- ✓ **Blood glucose**

- ✓ **Blood oxygen**
- ✓ **Blood pressure**
- ✓ **Weight**
- ✓ **Heart rate**
- ✓ **Lung capacity**
- ✓ **Activity**
- ✓ **Temperature**

The support network receives notifications, updates and insights

Helping people live independently and safely.

Help detect falls, incidents and changes in behaviour that may indicate emerging health or hospitalisation risks.

Connect families through the IntelliCare mobile app, which provides notifications and alerts. Give people a greater peace of mind and choice over how and where they live.

I'm in Perth, and I know that IntelliCare will tell me if I have to check in on Becky. It gives us both great peace of mind knowing she can live in the town she loves, and I don't have to worry about her.

— Jane, family member

Real people, real stories.

Using IntelliCare Becky, who is legally blind, is able to live independently in her unit in the country town of Cunderdin.

Thanks to the smart care solution she is able to remain in her own home and community.

Empowering people to live independently.

✓ Customise to suit anyone and personalise their support services.

Intellicare is not a one size fits all solution! Instead it can be fully customised to suit each person's unique needs, wants and goals.

✓ Improve outcomes with data-driven support services and care.

24/7 data provides insights and intelligence which empowers support teams to spot indicators of health and well-being decline, allowing them to adapt care proactively.

✓ Justify service escalation with live and historical evidence.

Easy to read graphs show changes in health and well-being and can be used as evidence to escalate and adjust care plans.

✓ Identify efficiencies and streamline support services.

Centralised information on an easy-to-use mobile or desktop platform that is accessible by the support team, enabling care tasks to be triaged remotely.

✓ Track health and well-being remotely using health metrics.

Compatible with 60+ iHealth, FitBit and Garmin devices, Intellicare highlights and tracks ongoing and emerging health issues using health metrics.
